

The creation of a leading IT service provider

Incepted in 1988, CrimsonLogic was part of the Singapore government's masterplan to enhance the country's position as a global trading hub. We conceptualised and developed the world's first nationwide electronic trade declaration and clearance system - TradeNet. It's a powerful eCommerce tool that received recognition and accolades from around the world. TradeNet's operational architecture was well-studied and documented by the Harvard Business School. In addition, CrimsonLogic has created landmark solutions in the trade and logistics, legal, government and healthcare industries.

Recognising the Internet's inexhaustible possibilities, CrimsonLogic soon extended from being a provider of value-added network services to offering international web-based services. CrimsonLogic develops innovative, trusted and secure eCommerce solutions, harnessing the full business potential of the Internet age.

Looking beyond convention

What distinguishes CrimsonLogic from others is our ability to anticipate the demands of the market. Not just meet them. This is evident in the unique solutions developed by our very own software development centre in Bangalore, India.

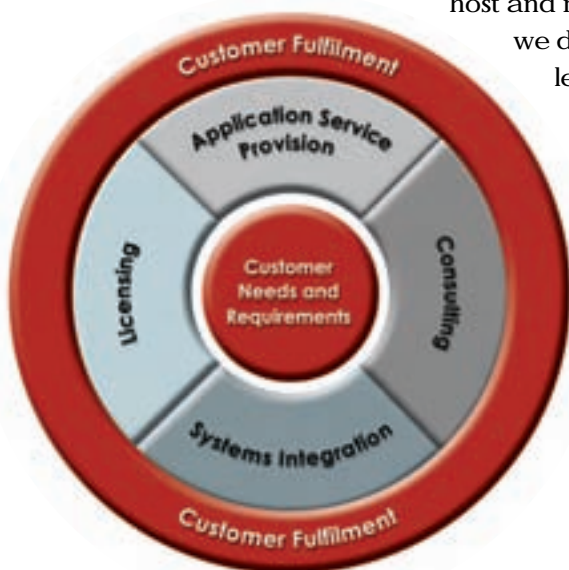

By tapping our diverse components and domain knowledge, we perfect our solutions for you. The applications we develop are efficient, effective and secure. Our services are affordable with low up-front fees. Our web-based solutions are simple to install. And you need not worry about hardware, software and maintenance issues. We take care of these for you.

The result: You build your business and services effectively without straining your resources. A CrimsonLogic assurance backed by more than a decade of experience in developing solutions based on ISO and Capability Maturity Model for Software (CMM-SW) standards.

Our business focus

The core of our business has always been the customer and CrimsonLogic takes its primary objective of customer fulfilment very seriously. Our services extend beyond being an application service provider (ASP), where we build, host and manage applications for our clients, to include systems integration, where we develop new and customised solutions that seamlessly synergise with existing legacy systems. In addition, CrimsonLogic provides consulting services where we conceptualise and transform ideas into sound eBusiness models. Lastly, we license our proprietary technology components to help you build and develop your own business-to-business solutions.

This fusion of services comes together in a perfect blend that CrimsonLogic customers can rely on for optimal results.

Making a mark in the global arena

Our representations today spread throughout the world in Australia, China, India, Malaysia, the Middle East, North America and Singapore. Strengthening this network are collaborations with key organisations in China, Ghana and Mauritius. Also, our strategic alliances in China, Hong Kong SAR, Japan, Malaysia, South Korea and Taiwan offer you worldwide connectivity, efficient service delivery and fertile grounds for cross-border eTrade. Now you can boost your overall efficiency and watch your business grow from the comfort of your office.

The power of technology on your side

CrimsonLogic's strength lies in the ability to provide total end-to-end solutions that marry technical know-how with business needs. As a champion of eCommerce, we have our fingers on the pulse of the latest technologies. Mastering the Internet and object-oriented technologies to transform otherwise complex procedures into smooth eTransactions and operations.

Put your trust in CrimsonLogic

CrimsonLogic was appointed by the Infocomm Development Authority of Singapore (IDA) to operate Singapore's first Public Key Infrastructure (PKI) Technology Centre. The Centre is set to establish an eCommerce environment that promotes PKI interoperability between Certification Authorities and applications.

CrimsonLogic also has the rare distinction of being Singapore's independent record keeper for a mission critical government system. This prestige is earned as we have the necessary security measures in place.

We design, develop, implement and audit our security policies and procedures to protect our networks, so information will never end up in the wrong hands. Also, we have in place stringent verification and authentication procedures meeting BS7799 certification standards.

Our multi-layer firewalls, information security policy development, system vulnerability detection and intrusion testing provides you with a secure and reliable electronic environment.

Our international support

For starters, CrimsonLogic experts continuously monitor our networks to ensure the highest level of reliability and performance. And if, for any reason, your business isn't firing from all cylinders, you're just a call away from instant assistance, 24 hours a day, 7 days a week. What's more, with our full range of support services in place, you can always count on CrimsonLogic.

- 24-hour helpdesk support
- 24-hour Data Centre support
- Disaster recovery capabilities
- Training

Now let's get down to business

It's time for innovative solutions to drive your organisation. With extensive experience in major industries, we have led the way in building secure, effective and efficient eCommerce solutions for business-to-business, business-to-government and government-to-government markets. You can rest well knowing you've entrusted your business to the professionals.

For a closer look at how our solutions can help grow your business, ask for these brochures today.

Business Intelligence

Our one-stop eBusiness site providing comprehensive, real-time market and business data, company and executive profiles, statistics, news and more. Accompanied by a hosted search engine that revolutionises the way you conduct searches across multiple channels and formats.

eService Components

A complete range of robust and scalable solutions to help businesses develop their own solutions and set up new portals while harnessing the strengths of J2EE, OO, XML and other leading technologies.

Government

Our solutions span across the key sectors of government such as trade, legal, education, social security, transportation, housing and more. We improve government interaction with its citizens and businesses, enabling faster information access, optimising processes and efficiently managing critical resources.

Healthcare

From processing inpatient and outpatient medical claims and making outpatient appointments, to wirelessly exchanging data between ambulances and hospitals for faster patient treatment, we make things simpler for medical professionals.

Legal

Speed up the litigation process with our end-to-end electronic litigation and judiciary system. Judges and lawyers provide the public with faster access to justice by cutting back on paperwork and re-engineering the legal process.

Trade and Logistics

Indispensable solutions for importers, exporters, traders, freight forwarders and manufacturers. All transactions can be made through one website, from procurement and trade-permit declarations, to inventory management, shipping and more.

For your organisation to succeed, you need quick and direct access to customers. You need streamlined logistics, a paperless environment for increased efficiency and costs to be kept low.

Introducing CrimsonLogic

We enable businesses and governments to connect and collaborate seamlessly with their partners and customers through the innovative use of IT. We develop world-first solutions such as TradeNet, eJudiciary and eStamping. Innovations that are in a class of their own.

We provide the competitive edge for companies big and small. For governments to engage and interact with businesses and citizens. And this is only the beginning...

"...Fill 1 form online and receive the import and export license 15 seconds later compared to filling up 21 different forms and waiting 15 to 20 days for 23 government agencies to process a request."

- McKinsey Quarterly 2001, No. 2 (on TradeNet)

"...it is estimated that TradeNet saves Singapore traders around US\$1 billion a year."

- Robert M. Howe, IBM

"...The costs savings when the system (EFS) is fully implemented are expected to be in the region of S\$4 million a year..."

- Society for Computers & Law, Volume 9, Issue 2

Outstanding Supplier Award 2001

- Inland Revenue Authority of Singapore

"The Singapore Electronic Filing System (EFS) is the world's first nationwide paperless civil court system ... Court waiting time has been reduced from up to 2 years to a matter of months."

- Journal of the Queensland Law Society, June 2000
